Phạm Trung Đức

Backend Developer

0329255823 ptrungduc1011@gmail.com https://github.com/khongphaiduc Hà Nội

CAREER OBJECTIVE

Passionate about software development with a focus on .NET, I aim to apply and further develop my skills through the projects I have worked on. I strive to contribute effectively to team efforts while continuously learning and improving as a developer.

SKILLS

C# Core	OOP ,SOLID principles, LINQ , Multithreading, Asynchronous (async/await), Lock , Semaphore
Framework	.NET Core ,Web API , RESTful API , gRPC, ASP.NET, WPF , Dependency Injection , Middleware , Entity Framework (Code First & Database First, Migrations) , Ocelot
FrontEnd	HTML , CSS , Bootstrap , JavaScript , ReactJS
Database	SQL Server, PostgreSQL , Redis , Elasticsearch
Real-Time /Asynchronous Messaging	SignalR , Websocket , RabbitMQ , Worker Service (BackgroundService)
Tools/DevOps/Testing	Git , Docker , Postman , Jmeter , Agile Scrum , xUnitTest
Soft Skill	Problem solving , business communication , adaptability , leadership and teamwork

PROJECT

Food Ordering Microservices DDD Dec 2025 - Present

Developed a microservices-based food ordering system following Domain-Driven Design (DDD) for scalable and maintainable services

Link source BE: https://github.com/khongphaiduc/food-ordering-microservices-ddd
Link source FE: https://github.com/khongphaiduc/food-ordering-microservices-frontend

- **Number of members in the project** : 01
- **Tech Stack:** ASP.NET Core ,Web API (Resful API) ,gRPC, EF Core, SQL Server, PostgreSQL, Elasticsearch, MinIO ,Ocelot , Redis, RabbitMQ ,OpenTelemetry , SignalR , JWT, ReactJS , HTML , CSS , JS

Key Features

- Implemented **JWT authentication and role-based authorization** for secure service access
- Leveraged **Elasticsearch** to provide **intelligent search suggestions**, enhancing user experience and improving search relevance.
- Implemented the **Transactional Outbox pattern with RabbitMQ** to ensure reliable message delivery and data consistency across microservices
- Developed **a real-time order management system with SignalR**, allowing staff to instantly receive and handle new orders, significantly improving operational responsiveness

Hotel Booking Management System Aug 2025 - Dec 2025

A web-based hotel management system that enables customers to book rooms online and make payments, while hotel staff manage bookings and check-ins/outs, and administrators handle users, rooms, services, reports, and revenue management

Link source : https://github.com/khongphaiduc/hotel-manager-booking

- **Number of members in the project** : 01
- **Tech Stack:** C# , ASP.NET Core Web API , EF Core, SQL Server, Redis, RabbitMQ, SignalR , JWT, OAuth2 , HTML , CSS Bootstrap

Key Features

- Built a full-stack hotel booking system with **secure authentication (Google OAuth2, cookies)** and **role-based access control**
- Designed and implemented **room, booking, and service management modules** with real-time status updates.
- Integrated **online payment gateways (VNPAY, PayOS)** and automated background tasks for booking lifecycle handling.
- Implemented **Redis-based distributed lock** to resolve **race conditions** and **prevent overbooking** during high-concurrency periods.

Impact

- **Implemented Redis** caching for frequently queried room lists, reducing database calls and **improving API response times by 66%** in performance tests
- **Reduced booking API response time from ~3–5 seconds to under 1 second** by offloading email sending to **RabbitMQ-based** background processing.

EDUCATION

FPT University 2022 - 2026

Software Engineering

GPA: 3.0/4

CER TIFICATIONS

IELTS 5.0 2025
