Hòa Lạc - Hà Nội

Skill

Front-End

- HTML , CSS , JavaScript
- BootsStrap

Back-End

- C# , Java , JavaScript
- Web API (C#) , RESTful API , ASP.NET, .NET Core , WPF ,Java Servlet
- Entity Framework (Code First & Database First, Migrations), SignalR, WebSocket
- LINQ , OOP , Git , Postman , Docker
- SQL Server , PostgreSQL (Indexing, Joins, Transactions)

English

- IELTS 5.

Career Objective

I'm a third-year Software Engineering student seeking an internship where I can apply my backend development skills, work on real projects, and continue learning new technologies required by the company.

Projects

Hotel Management System August 2025 - December 2025

A web-based hotel management system that enables customers to book rooms online and make payments, while hotel staff manage bookings and check-ins/outs, and administrators handle users, rooms, services, reports, and revenue management

- **Link Source** :https://github.com/khongphaiduc/hotel-manager-booking
- **Number of members in the project** : 01
- **Technology used** :

Front-end :ASP.NET MVC / Razor Pages, HTML, CSS, Bootstrap ,JavaScript
Back-end : C#, ASP.NET Core Web API (RESTful API), JavaScript
Database : SQL Server with Entity Framework Core
Security/Real-time: JWT, OAuth2 (Google Login), SignalR.

Key Features

- **Authentication & Authorization:** Secure login via Google OAuth2 and account system (cookies), role-based access for staff and admin.
- **Room Management:** Search, filter, and view rooms by type, price, capacity, amenities, and availability; detailed room pages with images, descriptions, policies, and reviews; add/edit/delete rooms and room types with pricing, amenities, images, and availability.
- **Booking & Payment:** Online room booking with customizable dates, guests, and services; integrated online payment VNPAY, PayOS, and bank transfer; automated background tasks for booking updates and customer notifications.
- **Staff Operations:** Dashboard access based on role, booking management by date/room/customer, check-in/check-out with QR code support, room status updates , and customer information management.
- **Service & Revenue Management:** Management of hotel services monitoring billing and invoice status, reporting revenue by day/month/year.
- **Real-time Functionality:** SignalR integration for **instant notifications** (QR code transfers)

Impact

- **Implemented Redis** caching for frequently queried room lists, reducing database calls and **improving API response times by 66%** in performance tests
- Used database **transactions to handle multi-step booking** and payment operations, reducing errors and ensuring accurate, real-time room availability

Recruitment Website May 2025 - July 2025

Hobby

I enjoy listening to music, admiring nature, and exploring new technologies. I also like playing sports and spending time with friends, which helps me maintain balance and stay motivated in my studies.

Education

FPT University 09/2022 - Present

Software Engineering

Third-year student

Developed a website that allows employers to post jobs and candidates to apply.

- **Link Source** : https://github.com/khongphaiduc/SWP391-GR5.git
- **Number of members in the project** : 03
- **Role Team** : Team Leader - managed GitHub repository and coordinated code versioning.
- **Technology used** :
  Front-end : HTML , CSS , BootStrap , JavaScript (JSP)
  Back-end : Java (Servlet) , SQL Server , JavaScript
- **Description** : The project builds an online recruitment system, connecting employers and candidates. Provides features such as job posting, job search, candidate profile management, role-based account access, and real-time chat to enhance user experience and engagement

- **Responsibilities** :
- Develop a real-time chat system using WebSockets, allowing candidates and employers to message with the support team.
- Building a system data statistics function: revenue report, number of users, number of job postings
- Developed customer report feature with date/tax filters, transaction summary, detail view, and Excel export.
- Requirements analysis and database diagram (ERD) design for tables such as Users, Jobs, Reports, Messages...
- Build the function of registering, logging in, changing passwords, forgetting passwords with data authentication.
- Display job listings, support search by keywords, industry, location,..
- Candidates can save and review their favorite job listings.
- Build a function to send error reports from candidates and employers, admins can respond directly.
